

GREENBRIER RIVER TRAIL

Year-Round Weather & Climate Guide

Historical averages for Caldwell / Lewisburg, Marlinton, and Cass, West Virginia

SOUTHERN TRAIL	CENTRAL TRAIL	NORTHERN TRAIL
Caldwell / Lewisburg	Marlinton	Cass
Warmer overall	Cooler mountain valley	Coolest reference point

Use this guide for trip planning, not as a forecast. The Greenbrier River Trail spans a long mountain corridor, so weather can differ substantially from one end to the other. Always check the current forecast, radar, trail conditions, and flood or winter-weather advisories before setting out.

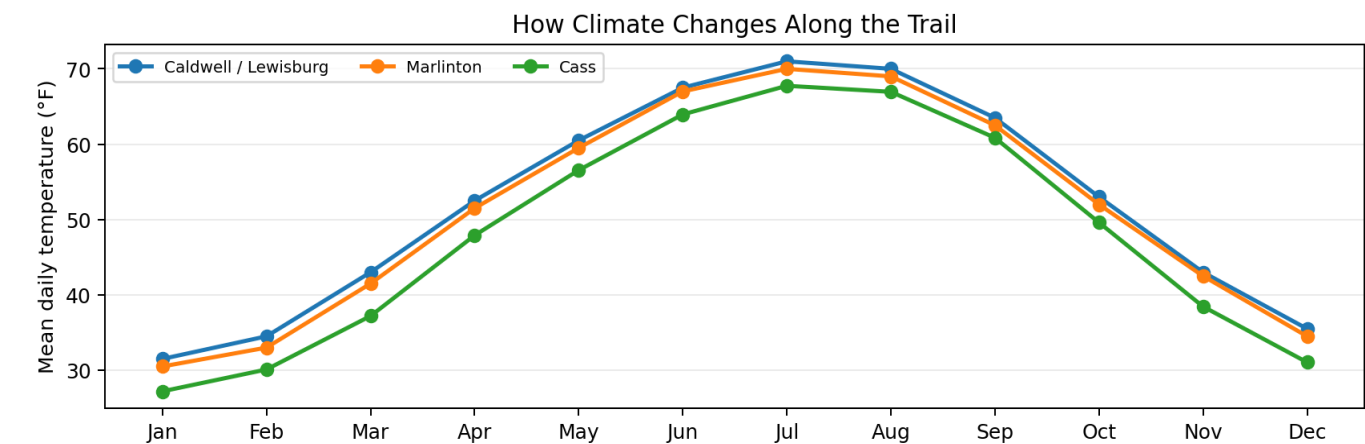

The overall pattern is simple: summer days are generally warm but not extreme, nights stay noticeably cooler, and the northern end near Cass tends to be colder - especially outside summer.

At-a-Glance Trip Planning

Season	What visitors should expect	Trail planning takeaway
Winter Dec-Feb	Cold days, freezing nights, snow and ice possible across the region	Winter riding/hiking can be beautiful but requires cold-weather gear and caution
Spring Mar-May	Fast temperature swings, cool mornings and a wetter pattern in April and May	Pack layers and waterproof protection. After prolonged rain, check trail and river conditions
Summer Jun-Aug	Warm afternoons, cool-to-mild nights, frequent showers and thunderstorms	Start early, carry water, and watch live radar. Afternoon storms can develop quickly
Fall Sep-Nov	Comfortable days, crisp nights and generally favorable riding conditions	September, and early October, are especially attractive for multi-day trail travel

Monthly Temperature Comparison

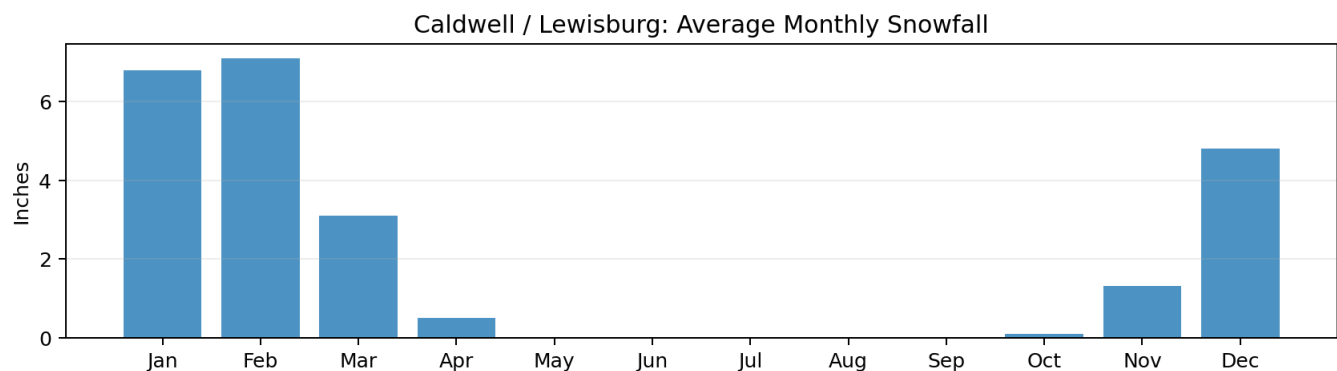

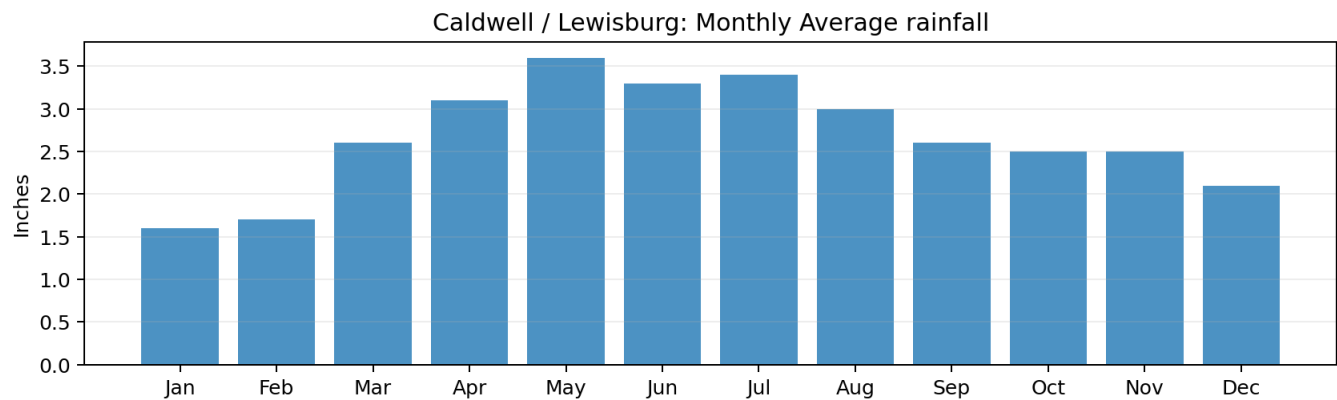

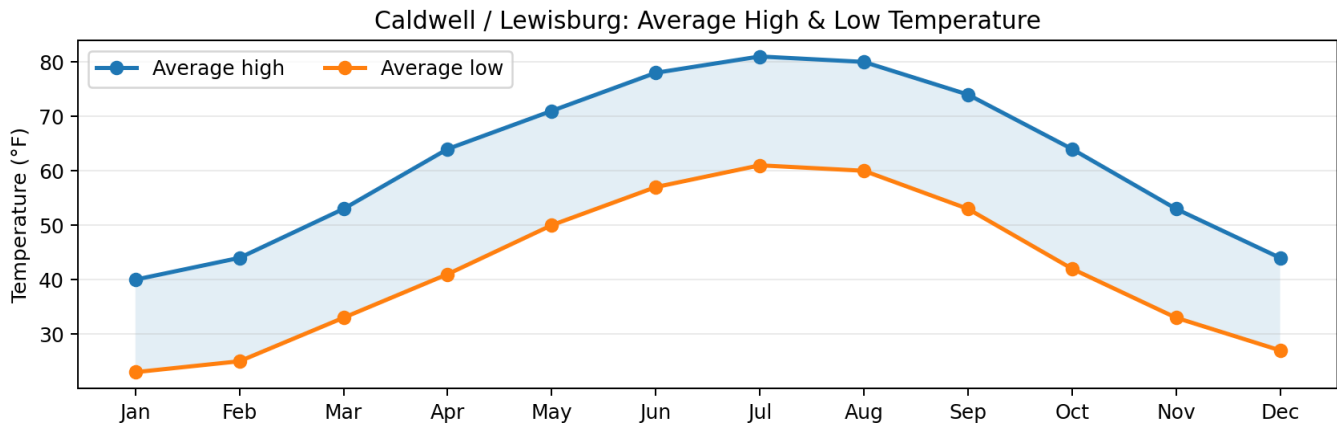

Best general warm-weather window: mid-June through mid-September is the strongest overall period in the WeatherSpark tourism analysis for Lewisburg and Marlinton. For cycling and hiking, September can be particularly appealing because temperatures ease while clearer-sky percentages are near their annual peak.

Caldwell / Lewisburg

Southern Trail - Caldwell is represented by nearby Lewisburg climate data

Warm summers, cold snowy winters, and frequent year-round precipitation. September has the clearest skies on average.

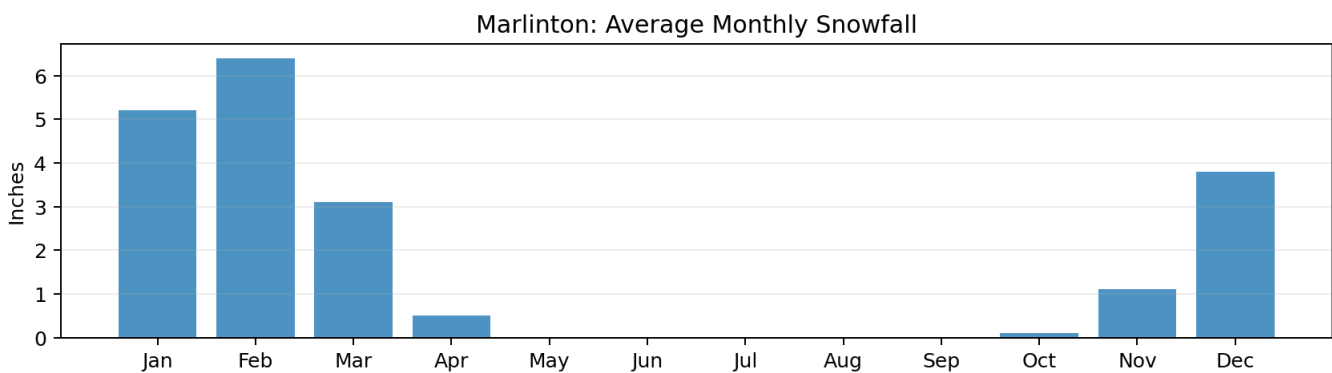

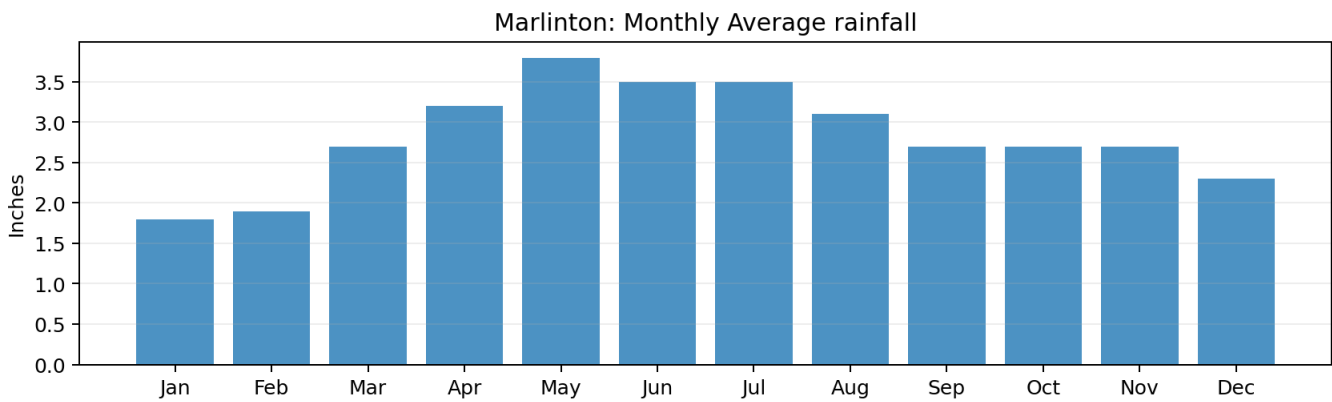

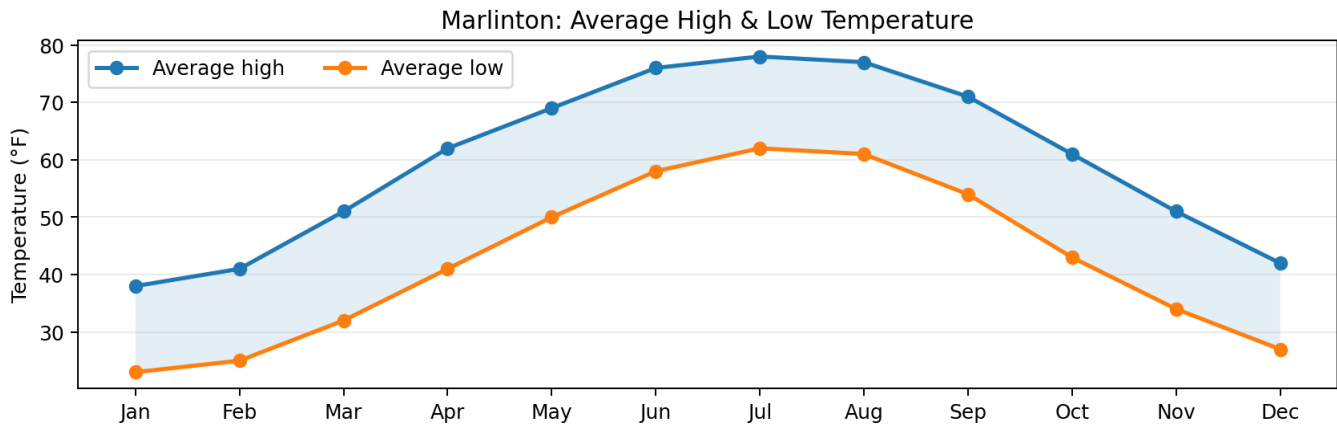

Warmest month	Jul: avg high 81°F
Coldest month	Jan: avg low 23°F
Wettest month	May: 3.6 in
Snowiest month	Feb: 7.1 in

Marlinton

Central Trail

Marlinton is typically a little cooler than the southern trail. July is the warmest month; February has the greatest average snowfall.

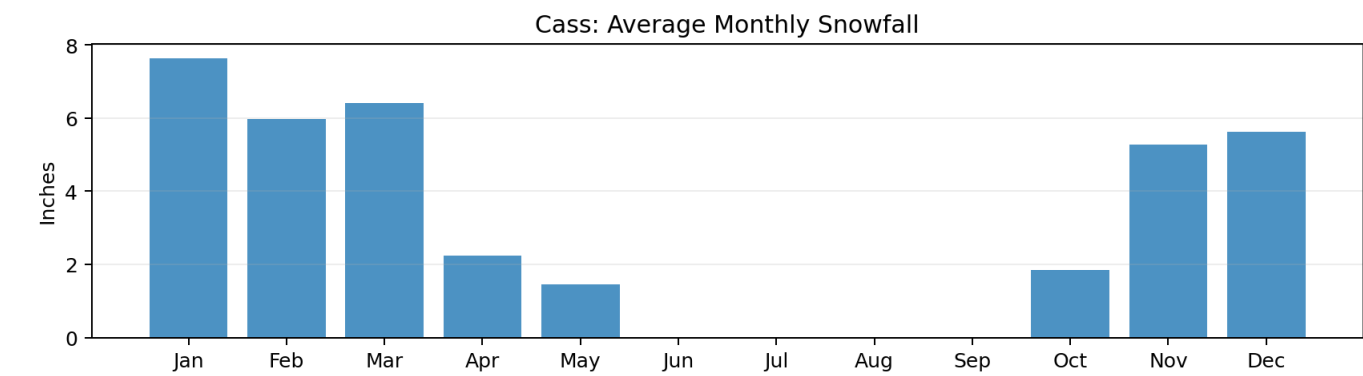

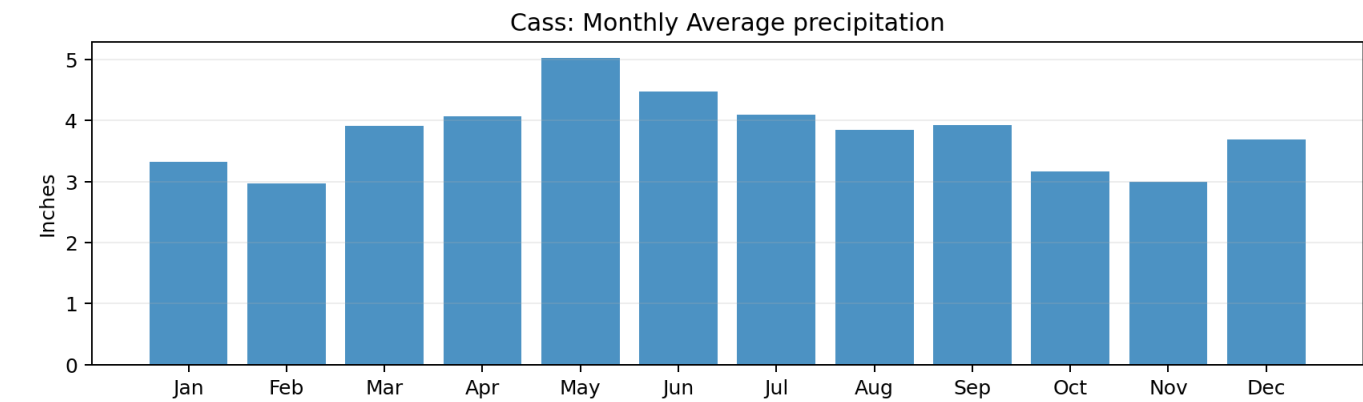

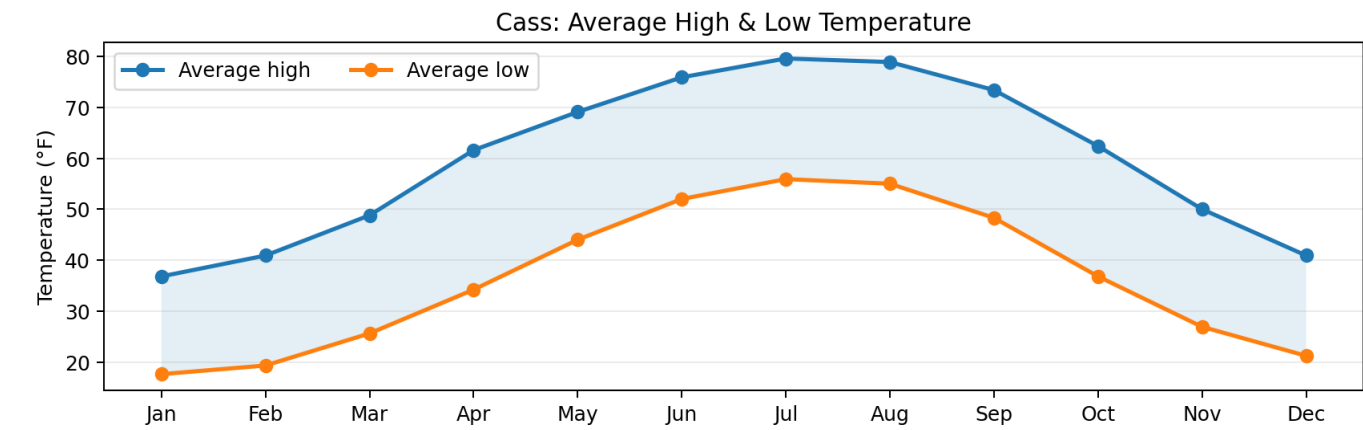

Warmest month	Jul: avg high 78°F
Coldest month	Jan: avg low 23°F
Wettest month	May: 3.8 in
Snowiest month	Feb: 6.4 in

Cass

Northern Trail

Cass is the coolest of the three reference locations, with colder nights and a longer winter-weather season. May is the wettest month in the PlantMaps climate dataset.

Warmest month	Jul: avg high 80°F
Coldest month	Jan: avg low 18°F
Wettest month	May: 5.0 in
Snowiest month	Jan: 7.6 in

About the Data

This guide is an original visitor-planning summary inspired by the type of year-round climate information shown by WeatherSpark. It does not reproduce WeatherSpark's graphics or page design. Values are rounded for practical trip planning.

Caldwell / Lewisburg: Caldwell is close enough to Lewisburg that Lewisburg is used here as the southern-trail climate reference. WeatherSpark supplies monthly average highs/lows, rainfall, snowfall, and clearer-sky percentages.

Marlinton: WeatherSpark supplies monthly average highs/lows, rainfall, snowfall, and clearer-sky percentages for Marlinton.

Cass: PlantMaps supplies monthly average high/low temperatures and precipitation for Cass. Weather Atlas supplies monthly snowfall averages. Because climate datasets use different stations, periods, and estimation methods, Cass snowfall and precipitation values should be treated as planning averages rather than exact expectations for any specific trip.
